

ARCHITECTURAL

SHEET-METAL

# ORNAMENTS

No. 1748, Scale  $\frac{1}{8}$  Inch=One Foot.

MANUFACTURED AT

THE KITTREDGE CORNICE AND ORNAMENT WORKS,

BY

**THOMSON & BAKEWELL,**

SALEM, COLUMBIANA COUNTY, OHIO

SECOND EDITION.

1879.

PRICE 24 CENTS.

**ARCHITECTURAL**  
**SHEET-METAL WORK**

**"For the Trade,"**

Comprising all descriptions of

**Galvanized-Iron Cornices,**

**Sheet-Metal Window Trimmings.**

**Pressed-Zinc Architectural Ornaments,**

**Sheet-Metal House Fronts,**

**Interior Finish, Etc., Etc.**

**Prices to the trade guaranteed to be below the cost of production in any other shop in the country.**

Quality of work, in point of style, finish, and ornamentation, unequalled anywhere. Best materials and most skillful workmanship always employed.

Work furnished either complete, ready for putting up, or in parts, ready for joining.

Construction drawings, fully explaining how work is to be put together, and how it can best be put upon the building, furnished with every shipment.

Contracts for the execution of work to architect's special designs made at any time.

Drawings for estimates may be sent at our expense per express. They will be returned immediately with proposition.

Full instructions and explanations freely given to the trade at all times, concerning all questions of erection and construction.

Satisfactory contracts made for delivery of work to all sections of the country, at low rates of freight.

We possess the only steam power cornice machinery in the world. We employ every possible labor-saving device which ingenuity can suggest. We have constantly employed a large corps of modelers, draughtsmen, die-sinkers and metal-workers—of the highest skill—rendering us at all times forehanded and ready for the largest contracts and the most intricate work offered. We are the largest consumers of galvanized sheet iron in the country. In 1875 this establishment executed over eight hundred contracts, besides furnishing the work for the Centennial Buildings. It has shipped its goods to every State in the Union.

Whatever advantages we may possess, all and singular, are freely tendered to the trade. Our sales are exclusively wholesale, and at low wholesale prices. We furnish sheet-metal work to the tinner and builder in the same general way that a planing mill supplies wood-work to the carpenter. No carpenter with a planing mill in his reach can afford to work out his mouldings or build his doors and sash. The same conclusion regarding sheet-metal goods is inevitably forced upon all who investigate the advantages offered by this establishment.

With largely increased facilities for manufacture we are now prepared to offer our goods to a larger class of customers than we have heretofore been able to supply—accordingly we respectfully solicit correspondence with every cornice-worker, roofer, tinner, and builder in the country.

There is profitable trade in this line of goods in every town and village, to say nothing of the cities. Sheet-metal architectural finish with the present prices of materials, can be put upon a building cheaper than wood, and at the same time afford a reasonable profit for handling. The detail and finish accomplished in sheet-metal work is far superior to that possible to obtain in cut-stone or cast-iron, while in cost it is much less than either. The durability of Galvanized Iron is undisputed. Accordingly it has the great merits of expediency, economy, and utility. Architects are fast learning to appreciate these advantages and are very generally specifying galvanized-iron finish in preference to any and all other materials.

---

SECOND EDITION.

---

1879.

CLEVELAND, O.:  
J. B. SAVAGE, PRINTER, 65 AND 67 FRANKFORT STREET.

We have many designs that are not here illustrated. Should there not be found in Catalogue any design corresponding close enough to what is required, send us sketch and description of ornament wanted, and in most cases we will be able to compose said ornament from designs in stock.

New designs made to order at reasonable rates. The cost of new dies will necessarily be added in the price of the article produced.

The list - price on ornaments, as upon all other goods manufactured at the Kittredge Cornice and Ornament Works, is subject to a discount (TO THE TRADE ONLY,) which will be arranged by correspondence.

Our goods will at all times be sold as low as any others of equal merit. We are prepared to supply ornaments corresponding with all designs published by other manufacturers, and at their prices. This offer renders our assortment unequalled anywhere.

*S. Royal Ward  
Sept. 1879*

## ARCHITECTURAL SHEET-METAL

### ORNAMENT.

---

The almost universal utility of Sheet Metal work in Architecture is strikingly illustrated in the use of Ornaments. There is, perhaps, no material or substance as well adapted to the purpose as Sheet Metal. Zinc is most commonly used, on account of its comparative cheapness and great durability, and is the material upon which the prices following are based; but copper and brass are equally applicable, and are occasionally employed. The use of Sheet-Metal Ornaments is comparatively recent in this country. Even at this present day there are sections of the country in which their use is scarcely known, and hence but little appreciated. In spite of the great utility possessed by this line of goods, its use has been retarded by lack of a supply of Ornaments of such shapes and patterns, and at such prices, as would render them both economical and popular. The designs and prices presented in the following pages are calculated, we believe, to meet in all respects the growing demand felt for these goods, and to overcome the objections heretofore prevailing against them.

In compiling this (second edition) Catalogue, we have aimed, as in the first edition, to present only such designs as will be of general service to the building fraternity—carefully avoiding those special patterns which, however meritorious they may be in design, are not of general utility. At the same time we have largely increased the selection, and trust our patrons may find many new designs in our lists that will be satisfactory and available.

In comparing the Catalogue here presented with all former books issued, it may be remarked that the cuts herein presented are made to a uniform scale of ONE INCH = ONE FOOT (with one or two minor exceptions, which are plainly noted in connection with the design); and that, in addition to this, the sizes are expressed in figures in connection with the cuts. The prices are to be found, in each case, in connection with the design. The designs are arranged somewhat according to kinds and classes, while at the close of the Catalogue will be found a copious index, arranged by numerical order, giving the page in the book upon which the design may be found. We believe this double presentation of the goods will be found in every way satisfactory. All the cuts were made from photographs of the work itself, and hence are accurate representations of the goods.

We desire to call especial attention to the leaves and flowers, calculated for garlands, and also the fruit designs used for the same purpose. In the collection here presented is an assortment from which almost any want may be supplied. Architects will find, within the reach of a very moderate sum of money, features of Decoration and Ornament which heretofore have not been

attempted in this country, at any price, in Sheet-Metal. To a limited extent ornamentation of this character has been applied to the face of stone work, in place of stone carving, as may be seen in the ornamentation of the frieze of Memorial Hall, at Philadelphia.

Attention is also directed to the natural forms adapted to various phases of Gothic architecture, such as the branches and twigs of various kinds, and the oak, ivy, laurel, rose, and other leaves, as presented in the following pages. Their use in frieze and spandrel pieces is at once tasty and effective.

Our assortment of Capitals is believed to be unequaled anywhere. A peculiar feature of our construction admits of change in size and relative proportions, so as to admit of supplying the greatest number of wants from each design.

The designs of leaves for faces of brackets, etc., are several times greater in number than ever before presented to the trade, as is also the assortment of rosettes.

Spun zinc trimmings, besides being a virtual necessity in every well-regulated cornice-shop, form one of the most tasty methods of decoration at the command of the metal-worker. Our facilities for the manufacture of spun work are unequaled anywhere. Besides the few goods presented herewith, we are always ready to get up special shapes to order at low prices.

We desire to call the attention of the trade to the shape in which work is shipped. In part, our designs are priced in duplicate—referring now to those which are made of parts—one price being for the work in parts, and the other for the same complete. Thus the purchaser has his choice. The advantage of buying work in parts is the saving in bulk, and consequent reduction of transportation, besides the opportunity of using workmen advantageously in the joining—opportunities for which frequently occur during slack times, stormy weather, etc.

Most articles shown in this Catalogue are carried in stock, and can be shipped on short notice.

## PRESSED-ZINC CRESTINGS.

One of the neatest styles of finish for the top of a house or porch is Pressed-Zinc Crestings. They are fastened securely in position by a tube soldered into the back of the perpendicular parts, and which slips over a rod screwed to the roof.

### DIRECTIONS.

A tube, made of zinc, galvanized iron or tin, from  $\frac{1}{2}$  to  $\frac{3}{4}$  in. diameter, according to size, is to be firmly soldered in the back of the cresting at intervals, according to pattern and height. The tubes should run nearly to the top of each spear-head, or elevated portion of the cresting, and extend down to roof line, being continued below the bottom of the cresting, according to the height it is to be set above the roof. A wrought iron rod, in diameter corresponding to the size of the tube, with three to five inches of one end bent and flattened to form a foot, is to pass up each tube. The rod should be long enough to reach the top of the tube. The flattened end should be provided with screw-holes for fastening to roof.

If it is desired to have the cresting finish at opposite corners with a similar figure or part of the design, find the center between the two corners and commence by laying the center of a section of cresting immediately over this point, and then join to it in each direction as may be required.

The sections of cresting must be soldered together. Cover the foot of each rod to make a watertight joint.

Rods extra. Prices quoted upon application.

Imitation of "Rock Faced" Stone Work for Facing Store Fronts, Quoins, etc.

NOTE.—We vary lengths of above without adding to cost.

## ENRICHMENTS FOR MOULDINGS.

In construction, we recommend forming the iron moulding to such a profile as will allow the Enrichment a true and even bed. Trim the Enrichment close, and attach by solder and rivets. By continuing the sheet-iron moulding under the Enrichment, a neater, stronger and better job is made. It will be found quite as cheap as the old plan of joining the iron to the zinc Enrichment at each side, while the difficulties arising from contraction and expansion will be in the main removed.

Our Enrichments are struck in three to seven foot lengths, according to the nature of the design. They are so calculated as to allow matching with the least possible waste.

This Cut is an accurate representation of our conventional figure of Justice. The principal members of figure, such as head, arms, feet, hands, etc., we supply from dies. Said dies were made from models executed by a skillful artist, and are correctly proportioned to size of each figure—hence its great superiority in execution to those made altogether by the hammer.

## SHEET METAL STATUARY.

The facility with which sheet metal can be worked readily admits of changes in size, position, drapery, and general arrangement, hence we have considered a variety of illustrations unnecessary in this connection; but we are prepared to execute, on short notice, the following figures, to any desired designs, and of any required dimensions.

|              |          |               |
|--------------|----------|---------------|
| Commerce,    | Liberty, | America,      |
| Industry,    | Summer,  | Indian Chief, |
| Agriculture, | Winter,  | Ceres,        |
| Columbia,    | Autumn,  | Concordia,    |
| Diligence,   | Spring,  | Flora,        |

And many others.

One special advantage of sheet-metal work of this description over all other of whatsoever material, is its extreme lightness. A figure of Justice with sword, the whole height of figure being some eight feet six inches, weighs only one hundred pounds. Our peculiar construction enables us to accomplish stability and strength in the figure, combined with the minimum of material and weight. It will be readily seen, therefore, that not only is there a saving in the cost of the figure itself, but also that all foundations and supports may be reduced. The expense attending placing in position is also lessened. This last item is especially pertinent to those figures intended for roofs of buildings, towers, etc.

Prices on sheet-metal statuary quoted upon application. We require the size of figure, and general design desired, and to know the position from which the figure will be viewed. Prices rule lower than for the same work in any other suitable material.

Artistic treatment and skillful workmanship always guaranteed.

Correspondence with Architects respectfully solicited.

## SPUN BALLS.

We present lists herewith of both HALF BALLS and COMPLETE BALLS, the latter being machine joined. In style and finish these goods are without equals in the market.

The Cuts on this page are to the uniform scale of ONE INCH=ONE FOOT.

## CLARK'S SOLDERING IRONS.

### DESCRIPTION.

The copper may be instantly detached by slipping the ring back and spreading the arms of the shank.

The arms of the shank being of unequal length, the necessity of removing the wood handle in attaching or detaching the copper is obviated, and inconvenience from the loss or misplacement of the ring is thereby prevented.

The jaws of the shank have their sides and ends bevelled, or dovetailed, to fit into corresponding gains made in the copper. A firm hold, bracing in every direction, is thus secured.

By advancing the ring on the inclined edges of the shank the jaws are brought still closer together, and a rigid attachment is maintained even though long use may deepen or otherwise wear the gains in the copper.

Attached.

In this cut the copper is represented as being broken away, to show more clearly the position of the jaws when seated in the copper. The shank is malleable iron, provided with wire ferruled Basswood handles. The special machinery employed to finish the shank and forge the coppers makes duplicate parts, and insures the fit of new coppers into shanks previously bought.

One pair of shanks can be used interchangeably with several pairs of coppers, and will last for years. We have used them in our establishment for three years, and they have given perfect satisfaction. Send for descriptive circular.

Price of Shanks, each 50 cents. Coppers at the market price of bolt copper. (Present price is 32 cents per pound.)  
Extra Basswood Handles, 50 cents per dozen.
